Researcher & Author — IPL Ball Tracking Performance Study ***June 2025 - Present***

- Designed and authored an original sports analytics study analyzing ~140,000 IPL deliveries from Hawk Eye tracking data to evaluate the effectiveness of the widely taught "good length outside off" bowling strategy.
- Built spatial and statistical models, including a Generalized Additive Model (GAM), to distinguish the independent effect of ball location from match context (score, over, and bowling style) on wicket probability.
- Identified measurable tactical patterns, including higher wicket probability from slightly fuller off stump deliveries (~6%) and distinct length strategies for fast bowlers and spinners.
- Identified tactical insights, confirming the "good length" zone as a genuine wicket hotspot while showing its independent effect is modest (~13% above average) and that match situation is a stronger predictor of wickets
- Research recognized by **Sigma Xi**, the world's largest general scientific research honor society. One of few high school students internationally to receive the distinction of Associate Membership.
- Won a **CREST Gold Award.**
- Published in the **National High School Journal of Science**; follow-up manuscript accepted and presented at the **icSPORTS** conference in October 2026. One of the only high schoolers to publish at **icSPORTS 2026.**
